

INNOWALK

Enables activity every day

Innowalk

An exceptional motorised dynamic stander enabling physical activity

The Innowalk is an innovative dynamic standing device suitable for children, adolescents and adults with significantly reduced independent standing and walking abilities.

People with moderate to severe motor impairment may suffer from neurological conditions or neuro-muscular diseases. They may have limited ability for independent movement and are likely to be less physically active compared to people without disabilities, due to spending most of their waking hours being sedentary.

The Innowalk provides proven health benefits through increased physical activity in standing.

Innowalk offers:

Assisted movement

Motor-assisted and repetitive movement of the whole body in an upright weight bearing position.

Full Body Support

Adaptable support system enabling appropriate positioning and exceptional comfort.

Safe use

Safety features such as an automatic motor pause if any resistance against the movement is detected, for example a muscle spasm.

EASY AND SAFE

A user-friendly, robust dynamic stander.

- Easy transfer in and out with a swivel seat and swing away leg supports, which allows for a smooth and safe experience for the user, either independently or with assistance.
- Limited physical load on assistants and caregivers.

COMFORT

Enables people with complex movement disorders to break up sedentary behaviour and move more frequently and for longer time periods.

- The Innwalk has thick padding on the leg supports and seat to provide increased comfort and support for the user.
- A large, stable tray supports the arms during standing and provides a good balance between support and opportunity for activity.
- Tilt in space angle provides stability and comfort for those with poor trunk and head control.

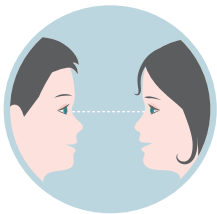

INDEPENDENCE

The Innwalk is easily adaptable for people with different needs for use in a home setting.

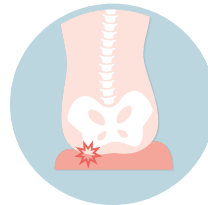

- Opportunity to stimulate muscle activity through active movement, depending on the users' abilities and capacity.
- A accessible remote control encourages user participation and independence.

Dynamic standing is physical activity!

Research and clinical experience shows that there are several benefits of dynamic standing for people with significant disabilities.

SOCIAL INTERACTION,
participation and
communication with
others at eye level

SKIN INTEGRITY
issues are prevented
through pressure relief and
increased blood flow

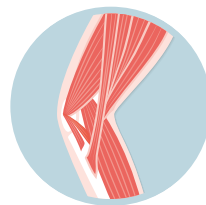

**RESPIRATION &
CIRCULATION** are positively
affected by vertical positioning
and activity

**PHYSICAL
ACTIVITY**
with low intensity

**GASTROINTESTINAL
FUNCTION**
is stimulated in an
active standing position

**STRETCHING OF
MUSCLES AND
JOINTS,** prevents contractures
and deformities, as well as
reducing muscle tone

MENTAL FUNCTION
is positively affected
in an active standing position

**BONE MINERAL
DENSITY**
is developed through good
nutrition, weight-bearing and
the use of muscles
