NF-WALKER 2

Designed for *movement*. Loved by users.

Join the fun!

NALKER

The next generation NF-WALKER 2 gives a superb opportunity to develop the child's potential for independent movement in standing position

Children usually move into a standing position at 9 – 12 months of age. An upright standing position with the possibility of movement, have great impact on the child's physical and psychological development.

They are in need of different levels of support and help to stand and to move around.

UP, STAND AND WALK

Children with functional impairments have limited possibilities for independent movement and are less able to move into an upright position. It can be children with diagnoses such as cerebral palsy, syndromes and Spina Bifida.

NF-Walker 2:

- Stimulates to independently move and participate in daily activities, with both hands free
- Makes it possible to **stand and** walk in a corrected position, with optimal weight-bearing in a diagonal walking pattern
- Is **custom-made** to make movement possible for children with severe disabilities
- Training, support and follow-up is an integral part of the Aftercare

SOCIAL INTERACTION

Research has proven that there are several benefits of active standing

BONE MINERAL DENSITY is developed through good nutrition, weight-bearing and the use of the muscles

Recent research demonstrates profound health benefits for people with CP, when sedentary behavior is replaced with light physical activity. (Verschuren et al., 2016; Katzmarzyk, 2010)

participation and communication with others at eye level

SKIN INTEGRITY issues are prevented through pressure relief and increased blood flow

are positively affected during vertical position and activity

PHYSICAL ACTIVITY with low to moderate intensity

GASTROINTESTINAL FUNCTION is stimulated in active standing position

STRETCHING OF MUSCLES AND JOINTS prevents contractions and deformities, as well as reducing the muscle tone

MENTAL FUNCTION is positively affected in an active standing position

WHAT IS NEW?

NF-Walker 2 has several substantial enhancements

Easier addition of extra equipment

due to flexible attachment points

Improved walking function and standing position with the new Dynamic Knee-stretch System • adjusted to stimulate knee extension or

adjusted to stimulate knee flexion

Optimal positioning with improved abduction joint

- fixed position 0-12 degrees abduction or
- free abduction within
- 0-12 degrees

More direction stable due to lock on the front wheels

Easy adjustment of the brace for externally rotated foot position with the new Brace Rotation System • by fixed positions or • by free rotation within 10 degrees

SIZE RANGE

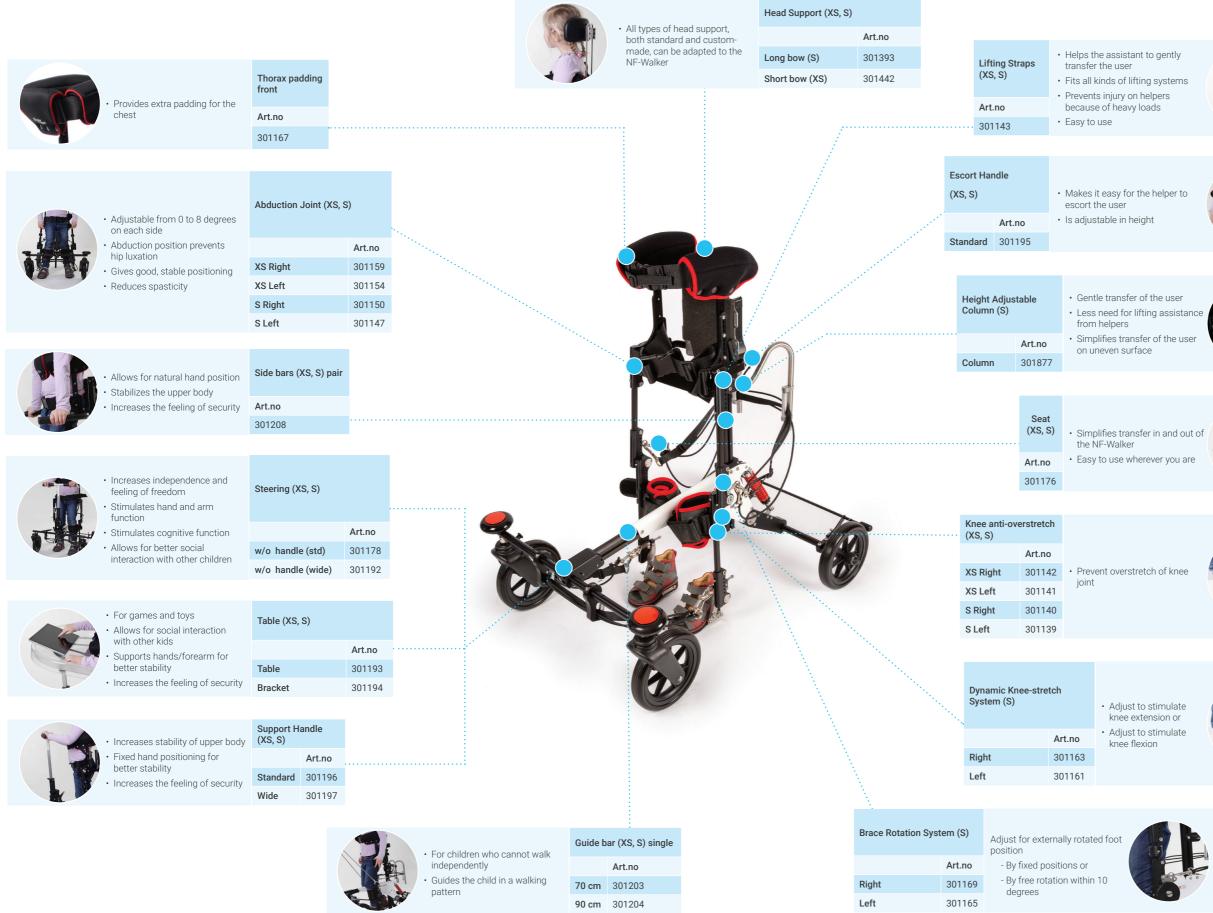

- Micro-kit available as extra equipment for 70-80 cm
 Individually evaluated based on user function and needs

AVAILABLE ACCESSORIES

OTHER ACCESSORIES

Micro-kit

AFTERCARE a vital follow-up service

Our highly-skilled assistive device consultants coach individually; sharing knowledge, advise and motivate both users, caregivers and therapists.

They make sure our custom-fit helping aids are adjusted properly and follow up each individual user, optimizing the outcome.

MEET SARA!

Sara is a four year old girl born with Congenital Disorders of Glycosylation (CFG). She is not able to sit, stand and walk independently. When Sara started with her first NF-Walker, her therapist started with guide bars to guide her movement.

After a while she took her first individual steps, and now she gives a shout of joy every time she can move around in it.

Sara has now tried the new NF-Walker 2 for a while, and the most satisfying feature, apart from looking very elegant and cool, is the hip belt which gives so much better support of pelvis. Since it is placed higher up the hip flexion is totally free, and she is well supported without having to use the breast support.

THERAPIST

MEET MARTINE!

14 1

Martine is five year old girl diagnosed with Ehlers-Danlos Syndrome (EDS) and unspecified encephalopathy. She is unable to walk independently, but is really curious to explore her surroundings and is very active via crawling. She has used the NF-Walker since she was two and a half years old, and for the last four months she has used the new version, NF-Walker 2.

Both her parents and kindergarten assistants find that NF-Walker 2 has great stability and robustness. The new padding featured on the parts of the device coming into direct contact with the body have really enhanced Martine's comfort as a user. The new seating solution also makes it possible to move Martine into the device from a sitting position instead of her having to lie down. This means she can take a more active role in the process of getting into the device.

I've noticed that it's simpler and quicker to move Martine into the new NF-Walker 2, and she has also become more active in participating in the process.
